Python Path

This extension adds a set of tools which help you generate internal import statements in a python project.

Features

"Copy Python Path" is accessible from:

- Command
- Explorer contextual menu
- Editor contextual menu
- Editor title contextual menu

Basic Copy Python Path

Copies the full module name of the current file to the clipboard.

Generate import statement

Copies an import statement for the selected text to the clipboard. In case of a simple selection, the generated statement will be:

```
from module.name import selected_text
```

In case of a multiple selection, the generated statement will be:

```
from module.name import (  
    selected_text_1,
```
