## Postfix templates for Python

simply fork from [ipatalas/vscode-postfix-ts](https://github.com/ipatalas/vscode-postfix-ts), and change some code in order to work with Python

## Features

All available templates (expr means the expression on which the template is applied):

Template	Outcome
.return	return expr
.len	len(expr)
.int	int(expr)
.iter	iter(expr)
.type	type(expr)
.print	print(expr)
.if	if expr:
.ifn	if expr is None:
.ifnn	if expr is not None:
